ABOUT SAFEPASS

Mission

Provide sustainable, integrated visitor management solutions that *elevate safety and security*.

Vision

Remain a leader in global facility management through innovative, simple and reliable security and visitor management solutions.

Management Team

Our management team consists of various technical and non-technical managers. Each team member comes with years of experience in assorted industries (Oil and Gas, Insurance, Government, Military, Maritime Shipping, Healthcare, Investment Banking, Marketing, and more). This breadth of background experience gives SafePass an unparalleled edge in understanding the facility security needs of large organizations and how best to fulfill those needs.

THE SAFEPASS SOLUTION

Visitors can be the most challenging moving parts of physical security. Where traditional Visitor Management Systems offer support only at the check-in location, SafePass goes above and beyond by continuing to track visitors the entire time they are on-site.

The SafePass Visitor Management System consists of three components: (1) Wearable Technology Badges; (2) Cloud-based Visitor Management Software; and (3) Robust Visitor Check-in systems.

RENEWABLE ECO-FRIENDLY SMART BADGES

SafePass badge is far superior to the traditional paper badges and costly plastic ID tags which offer no tracking capability and very limited data. Owing to their disposable nature, these products significantly increase administrative burden and the cost of doing business. Additionally, the waste generated by disposable name badges affects our natural environment, further increasing the carbon footprint. SafePass is a step forward in any facility's overall sustainability.

SafePassbadges are original, high-tech, interactive visitor badges that offer unprecedented insight and management of personnel that makes for a truly unique visitor experience.

Our reusable, wearable technology badges provide real-time visitor location through existing Wi-Fi infrastructure. No additional hardware installations are required and allows for a quick setup and implementation.

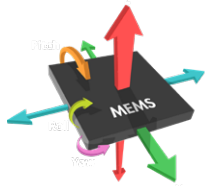

INTEGRATED TECHNOLOGIES

Wi-Fi Location Tracking

Wi-Fi technology embedded in our badges utilize existing Wi-Fi routers to provide Real-Time Location Tracking (RTLS) of guests and IoT connectivity.

Integrated Sensors

The technology within each SafePass badge allows for continuously location tracking. Condition monitoring of the badge prevents tampering.

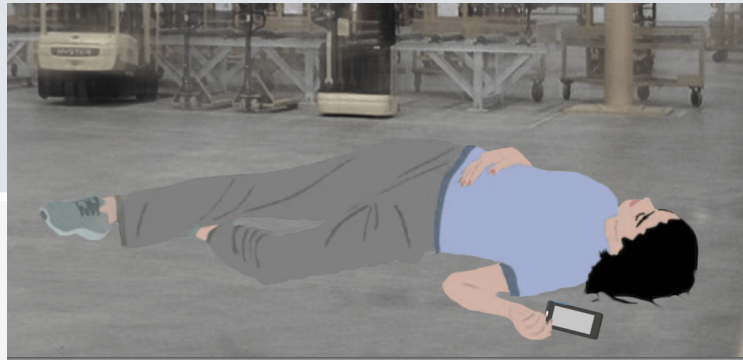

E-Paper Display

The use of E-paper technology in our digital badges allows them to display a range of information, including a noticeable photo of the visitor, as well as other vital information. Widely used in Amazon Kindle e-Book Readers and other applications, E-paper allows for a high-resolution, programmable digital display, without the drawbacks of more power-intensive LCD technology. This ultra-low power requirement of the SafePass badge allow for its extended battery life.

Smarter Safety Measures

Receive alerts from badges with questionably low behavior for reduced insurance costs, increased safety recognition and overall risk reduction.

Response time becomes extremely important when your visitors are immobilized, or when badges are disposed of. SafePass systems monitors mobility patterns and notifies security staff when our smart badges exhibit little or no motion.

VISITOR MANAGEMENT SOFTWARE

Our fully functional visitor management software is securely hosted in the cloud. Visitor data is stored and protected from tampering and ensures accurate electronic visitor logs. Keep your facility in privacy requirements.

- Pre-registration and standard checking flow
- Cloud-based data storage
- Access on all devices and platforms
- Global deployment and quick implementation of company security policies
- Automatic check-out when badge is returned

Front Desk Kiosk & Facial Recognition

SafePass streamlines the check-in process via facial recognition. The use of an Apple® iPad app eliminates the need for a cumbersome and restrictive keyboard and mouse, and the device's integrated camera simplifies the process. Once a person has been verified and a facial record is stored in the system, visitors are able to use the camera on an iPad or desktop PC to quickly sign-in, notify the host, and pick up a digital badge for their visit. SafePass is designed to provide a secure, quick and fully automated visitor check-in experience.

GEO-FENCING

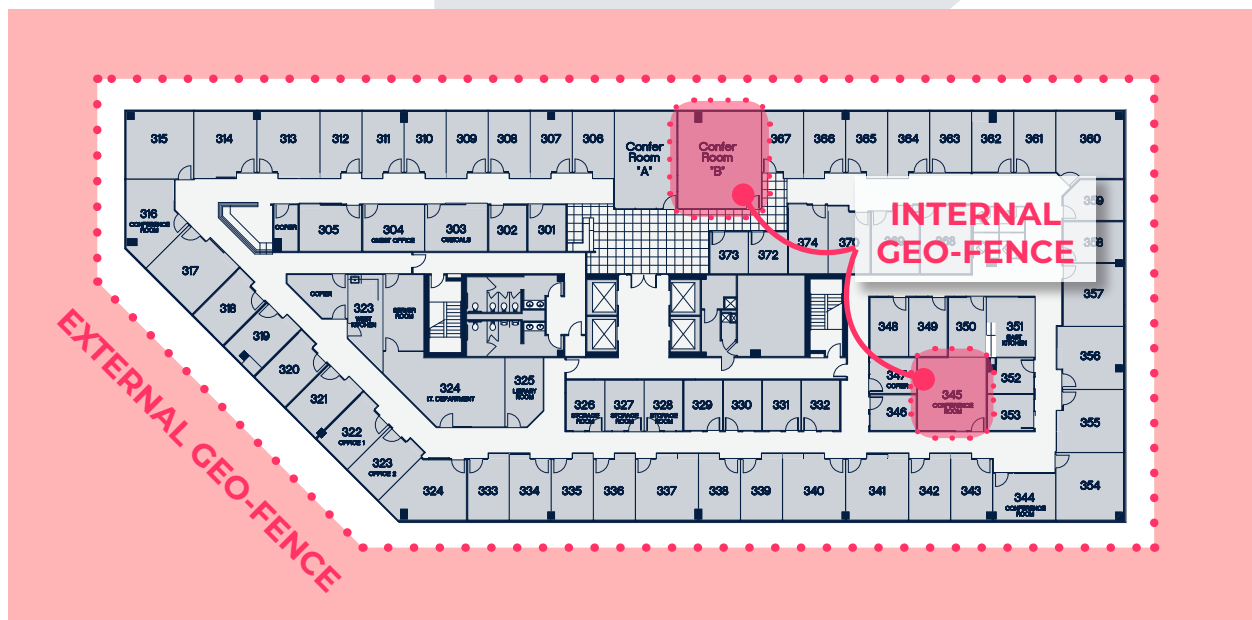

SafePass is the only visitor management systems with the ability to create custom internal and external geo-fences.

External Geo-Fence

Implementing an external virtual geo-fence protects from loss of visitor badges and help maintain visitor logs compliance when visitors forget to return to the front desk to checkout. When visitors breach the external geo-fence our badge:

- Changes display to instruct visitors to return to the front desk, activates an audible tone and flashes the LED light
- Notify staff via our VMS software, email and mobile app
- Badge will self-expire to prevent use without permission

Internal Geo-Fence

Prevent illegal entry into restricted/sensitive areas at your facility by defining custom unauthorized regions for visitors. When visitors breach these regions, our system:

- Changes display to let visitor know they are in a restricted area, activates an audible tone and flashes the LED light
- Notify staff via our VMS software, email and mobile app

FEATURES & BENEFITS

The SafePass Visitor Management System provides for:

IoT Push Notification

Keep visitors informed with real-time updates broadcast to each badge, resulting in a greatly enhanced visitor experience.

Reduce Risk from Emergencies

Knowing exactly where visitors are located in case of an emergency. This allows any organization to minimize risk.

Marketing

Know the “why” in people movement. Increase revenue by leveraging location and condition-based marketing.

Trends and Analytics

Gaining insights toward better productivity, maintenance and improvements. Knowing how visitors and employees move allows for better planning of resources.

SOLUTION FOR INDUSTRIES

The multifaceted business environment and multi-level organization, which can easily overwhelm even the most robust security team. SafePass provides solutions that meet the specific needs of our customers.

Protecting customer data privacy and safeguarding digital and intellectual property. These are all vital to keeping a competitive edge, maintaining brand image and potentially saving businesses millions of dollars. SafePass helps manage all visitors and vendors.

In addition to safety and security, protecting intellectual property is vital to keeping a competitive edge. SafePass enables our customers to track visitor location in real-time and keep reliable visitor logs.

Government facilities, where managing security, personnel and access is a must. These include military bases, prisons, courthouses and municipalities and more.
